i'm excited too. build the box. i plan on having an el84 wired in triode paralleld in triode to power it. 2 tubes per channel would net 2.6 watts or maybe even go 4 tubes to net 5.2 watts.Guys, post your dca5.5 cabs in this thread. I'll take a pic of mine tomorrow and post it. I think the only way to add a picture is :-upload to your website-when posting a reply, look for Optional Image URL at the bottom and enter the website address. Don't forget to preview.
