hello , would like to know if i can make and use a compression horn tweeter for a line array speaker ,i would make my own horn lense around 1" to 2" wide and 80" to 84" tall ,but dont know how deep to make it or if the depth tune the horn or not ,but i thought i could use one driver for the tweet instead of multi drivers ,for one the cost would be lower ,it would be paired up with either 16x5.25" mids or 18x4.5" mids or 24x3.5" mids ,have not decided yet. and it would be crossedover around 1500 to 2500hz ,any ideas?
