Hi, Im still not sure about the difference between a single vs tweeter line. What exactly does a LA operating in the nearfield and farfield (single tweeter) sound like? I listen in a dedicated room, in the seated position. The room is 14 X 13. I like the Needles, although they seem to have disappeared from the suppliers sites. Im torn between the line of tweeters being more proper but the fact that one can invest in a far better single tweeter. Do 8- 24 medium quality tweeters sound better than one very high end tweeter? Thx taylor
