Subject: Large Heils As A Line Source

I am considering using 4-8 large Heils per side as a dipole line source. Has anyone tried this? If so, what were the results? I was told that the large Heil can typically be crossed over at 800Hz. Would using 4-8 pers side lower that fiqure? Also does overall efficiency increase much (I know power handling does)over what one Heil by itself has? Thanks in advance for your help.thetubeguy1954
