So what i did was cancel my order for (no refund just a hold and credit) from supplier here in Canada for a bunch of 8 inchers i was getting. I read ALOT on here and realized that all the stuff that i had retained from the late 80's early 90's wasn't cutting it anymore. The idea i have is still to make an open baffle line array. I listen to an eclectic mix of music from classic rock to hip hop. i.e Yes Floyd Zeppelin Genesis (with Gabriel its not Genesis without him) uriah Heep ..... 80's ....90's Hip Hop I read a cool but dense white paper on Line Arrays but my comprehension is still not complete till i build one. SO !I am going to get 12 of these MG18WK0908 Vifa speakers and 2 of the LCY110 Ribbon tweets with my credit.I really want to try the line array so the question is, DO i go a sealed array ? An open baffle array ? Wide baffle ? Thin baffle ?I will go with whatever the more experienced guys think will sound the best in general.I have active x-over and multi channel capabilities.P.S ... i dont build with MDF i use 3/4 and up white Pine . This stuff has interesting sonic energy characteristics. Anyway as before thanks for any input, i want to order these Vifa's on MOnday if i finally settle on something.P/N Size VC Type dB W Z Re Le Ce Fs Vas Qms Qes Qts Xmax CutoutMG18WK0908 18cm 25mm Fiber 87 60 8 5.9 .88 24 34 45 2.0 .42 .35 ±5.5 146*also posted DIY*
