How do you feel about using eq for good drivers? Im working on an array using the focal polyglass line 6.5" and a single fountek. Im deciding on whether to just design a passive xover and use a deq2496(the auto eq looks nice!), or go active and get a dcx2496. I am probably going to test out the new behringer a500 amplifiers with these speakers. I would only use one if I go with the deq, but will need 2 of them if i go with the dcx. So I figure it will cost about the same price for either option. Does the dcx provide enough eq in itself? one of the main things I would like to eq up is the low end response of the mids because i will be going with a rather small box. thanks for any help/input on these devicesjustin
