Subject: line arrays and finer detail? Posted by Gene on Wed, 23 Aug 2006 01:36:30 GMT View Forum Message <> Reply to Message

I can understand why a line array produces less harmonic distortion due to each speaker driving way 1/("number of speakers") th of the possible distortion. However, why then is there more detail to the music? And isn't the detail often perceived as a bit of "brightness"? When we want to hear more detail we tend to turn up the treble. Gene
