Subject: Re: Array Bass Posted by zobsky on Mon, 11 Sep 2006 18:01:30 GMT View Forum Message <> Reply to Message

would a high efficiecy woofer (say an eminence beta 12) in a compact (say 2 cu. ft) box below the line work to get a clean 40 - 50 Hz for domestic applications? I'm pondering the same question myself. I was also wondering if a sub amp (they usually have 12dB crossovers) tapped into the speaker level input to the line array might work to roll off the bass around 120 - 150 Hz? Thanks
