>>Once you get the cabinet dead sounding , there remains the>>standing waves ?Dead cabinet - to reduce wood vibrations that color the sound.Echo - Have you ever been in an empty room and talked? Echo.Make a small box and stick your head partway inside, make a loudburst of sound, you hear echo. This echo needs taming with the fibermaterial that you install inside the box to reduce that echo thatsmears your sound.Audio is simple. Hammer to test dead cabinets, your head insidethe box to 'test for echo'.<http://www.amazon.com/Test-Echo-Rush/dp/B000002JAI..>
LOL ..
