I see. Then connect it like this: (+) | | ----- | | s s p
p k k | | | | s s p p k k | | | | s
 s p p k k | | | | s s p p k k | | |
----- | | (-) Each speaker is represented by "spk" with the "s" side being
positive and the "k" side being negative. The total impedance of the network is double the
impedance of a single driver.
