This is very different from the XT8. The goal here is not to "beat" the other arrays in performance but to offer a less costly alternative that will perform very well. The tradeoffs:1) Lower sensitivity than our other arrays (88-91db target)2) Higher crossover point to the subwoofer (100-150hz)3) Less Sd (surface area) due to the smaller woofersAdvantages:1) Lower cost2) More tweeter choices to meet different budgets3) Symmetrical coverage4) Smaller cabinet footprint with less weight5) Options for system impedance
