
Subject: Negative signal applied to RS 8

I own a pair of RS 8 from Selah Audio Rick Craig's now discontinued design !!!!! and I also complain of the unnaturalness of the mid's and lack of openness and transparency, Rick redesigned the crossovers but in vain . I use 8 Dayton's RS 180 and 8 Fountek ribbons , unfortunately I am not good in electronics so I don't really have the ability to mount a negative reducing circuit , but I wonder if there is anything on the market that is ready to plug in and could do the same job ??? I've also used DCX but with little improvement. I am tempted to think that the Dayton's are not a good option ? but maybe reducing the negative signal would do the miracle happen. Any suggestions are welcome JP
