I am not into spending money just for fun, or to impress anyone. I am looking for price/performance for my application, with RCA connector, and 48 dB slopes. Looking further at Behringer DX2496 @ \$260, it has balanced in / out puts, I need RCA. The Rane crossovers have the same problems: 24 dB slopes and all Balanced connections. The Marchand model MX16 is \$400 USD for the kit. Which is more than I want to spend, But I don't see much else that fit what am looking for. Any other suggestions? Tom
