Hi Marlboro, No, I have not purchased those coaxes yet. There is dearth of drivers here in India. Importing them is not viable for a DIYer. So I had to choose the drivers first and check out whether they were usable in a line array. I knew the Qts was too high for a sealed enclosure use. Of late I have seen good quality 4" drivers (dashboard use) and came up with this idea of LT eq. When I read that ids25 are equalised too, I thought it was possible too use car coaxes in a line array by LT.
