Subject: Re: How to burn-in array speakers Posted by Wayne Parham on Wed, 05 Nov 2008 18:36:46 GMT View Forum Message <> Reply to Message

I would prefer a little excursion, myself. Not anything close to x-max, but maybe 25% to 50%. A midbass sine wave is easier to cancel acoustically, running even numbers of drivers reverse connected. That way you don't have to hear them, at least not loudly.
