Subject: Headphone amp

I am looking for a Kit or plans for a high quality/low cost headphone amp. I hooked up a headphone jack to a box and plugged it into my Classe' Four preamp outputs. The power output is fine but I hear some "hash" in the high end. When I hooked it to the outputs on a Zero gain buffer preamp I have there was a lack of dynamics but no "hash". So I would like to build a preamp with some gain and high resolution. Any help would be appreciated!
