I have access to several 4'x 8' sheets of Johns Manville AP Foil Faced Foam Sheathing. It is 3" thick.[http://www.jm.com/insulation/building\\_insulation/products/bid0022\\_ap\\_foil-faced.pdf](http://www.jm.com/insulation/building_insulation/products/bid0022_ap_foil-faced.pdf) I thought if it is similar to OC 700 series I could strip off the foil and straddle 2' x 8' pieces of it across corners. Could add fiberglass behind it too if helpful. Anyone know, or can tell from the link, if it is useful. Don
