Subject: Neutrik Microphone Posted by Ed Form on Tue, 22 Jan 2008 01:04:19 GMT View Forum Message <> Reply to Message

I need to use a Neutrik 3382 measurement microphone for a week or so while I get my usual mic serviced and recalibrated. The spec sheet says to phantom power it with 15-30volts but my soundcard input has 48V phantom supplies - everything seems to have 48V now. Does anyone know if the microphone will be OK at the higher voltage?
