Thats my thinking too-the higher quality driver will suffer less power compression,perhaps closer to what my jbl supposedly experiences-~5db at rms rating. I want to measure SPL accurately and then i can know -cabin gain-power compression-max SPL (with curves)-inside and outside of car...all this requires SW to do correctly and quicklyAnd NOW the guy who has the spare DD2012-he has a spare 1ohm stable amp *(750watts) !!! i feel it would be rude to ask to borrow that too-its not like i know him THAT well.....and he doesnt live in my city...Cheers!Mike.eCheers!
