I'm interested in trying a new amp for my car. Two channel system. Older Eclipse 5303 head unit and Nice Infinity Kappa 6.5 Components in doors. The one in it now came with the car, not sure of brand I think 50 watts/ channel. I'm all about quality sound, 50 wattish is fine Old or new. I heard that 80's Linear Amps sounded good. Any suggestions? Thanks, Pete
