Hi Wayne,Stayed up listening to this until 5:30 am last night! Both the shortwave and AM too. Great!In this email you will find additional photos - one is of a "rough schematic" I drew to go along with the bottom view shot of this mystery Emerson.Questions/explanations:1) One of the photos shows a red marker pointing to what I think is a cap. There are several of these near the two "coils." These components have embossed colored dots on them and are rectangular in shape. Are these in fact capacitors of some sort?2) By the way, what are those two "coils?" Are these the antennae - one for the am and the other for the short wave? 3) Could you tell me what those two square metal things are on each side of that one 6D6? (Marked as a ? on my rough "schematic"). 4) There are six tubes in this Emerson. In case you cannot make it out here is the tube compliment:(1) Type 43(1) Type 75(1) 25Z5(2) 6D6(1) 6A7Regards,Mark
