Airline brand radios were sold at Mongomery Ward and were generally made by an OEM and branded as Airline. Mongomery Ward offered several models through the years. There are some books that show various old radios and old catalog and magazine ads, but there were so many brands and models made that the books I've seen only cover a tiny selection. Tubes are available at BOIAudioworks.com and knobs and other parts are available at TubesAndMore.com. Do you have any photos of your radio? Do you know what tubes were used inside? Does it work?
