
Subject: Getting Qts out of the way

It does help indeed, MArtin! You are basically sugesting that I get the Q_e equal (or close) for each circuit. That makes sense. This will certainly allow a comparison of simply the distortion effects and other frequency anomalies, versus the effects the amp impedance has on performance. I will insert maybe a 2 ohm resistor to increase teh Q_e of the SS amp speaker circuit. Good suggestion from you again! thanks to you & Wayne for guiding hobbyists like me as I continue my fun hobby of figuring out what exactly does sound better, and what is snake oil! thanx-akhilesh
