Can anyone give me advice on buying an older model stereo reciever? I hate the sound of new stereos and have been researching older ones and looking on ebay to find one but I have no electronic skills to speak of. Also, being a young professional musician I am on a very tight budget. I just want something thats not to high maintainence but would bring out good sound on my vintage record player and newer cd player. After reading alot of these forums and realizing that you guys all really know your shit,I'm a little nervous that I guy like me who can't do my own repairs might be asking for trouble. Any suggestions would be GREATLY appreciated. Thanks!
Johnny
