Hi Guys...I came into possession of a British made Beam Echo intergrated amplifier circa 1965. The info I've been able to obtain on it is sketchy at best. It has a nice tube lineup (Quad EL-34's) and before I power it up,I would like to get an Owners/Bench manual for it but it seems I'm coming up blank. Anyone have experience with this unit or maybe direct me to a site?
