G'day Guys, firstly, if my question seems dumb, it's because I know NOTHING about electronics except that it hurts when you get electrocuted!! I am an aircraft maintenance technician and a jet engine specialist, but amplifier wizard - NO.I have a Marshall B150 Valvetstate Combo. The speaker has been replaced with a 600w Precision Device but the "head" is standard.Is there any way I can modify the innards of the amp to get more volume out of it? If there is such a mod, I would want the amp to remain safe and not want to "let the smoke out".I am living and working in Saudi Arabia so it's not that easy to just go and buy a second head. I can buy one online but it would cost me as much again in shipping to get it to me here.Thanks, any help is appreciated.
