1.) Waveform checking procedures?2.) Testing measurements and what are the terms and names?3.) Measure impedance for input and output on each stage? how do i do this with my DMM or Oscilloscope?4.) Time measurements? phase, pitch,frequency, period and time5.) Frequency Response test procedures how do i do them with a function generator and a DMM or oscilloscope?6.) Overloading the input measurements? how to measure this? 7.) Measure the Current Draw on each stage or Measuere the Current Draw of the power supply?
