Hi,I want to spend some money on an amp that works great with the pod xt live from Line6.What's the best thing I can do? Buy a combo or a (half) stack? I want some quality and I want to spend around the $600-$700 for it. I want it to use for practice and for gigs in pubs/bars (around 200-people)Could someone give me some nice recommendations?Thank You
