---

heya im buying a cab for xmas, probably marshall AVTC412A (the angled one) just as my first budget half stack and then i hope to get the B cab, and then a proper head unit, i hav a marshall MG50DFX amp, can i use that as a head unit, and if so, which wires will i need to connect the cab to the 50DFx, as im told its a bad idea to use guitar leads, any help and direction would be considered very useful.thanks FenderBoy™
