Subject: I thought I was going deaf Posted by Ion on Tue, 14 Feb 2006 06:13:41 GMT View Forum Message <> Reply to Message

The weirdness of this problem was the fact that I've alwaysconsidered that a speaker connection was on or not on--not some dim place in between. So my right side was fading and I thought I was losing myhearing. I finally fixed the problem after the connection(which went through a speaker a/b switch) broke and tookout a section of wire and hooked it up direct. I can't understand how such a connection could begin to fade. Can something go bad in a speaker a/b switch? Not much else new.
