Hi, i would like to run my vellocette through my trace elliot 'tramp' speaker. I was thinking of making a jack lead with lucar female ends to clip on to the tramps speaker. Is this the best way of doing this? ohms??it seems quite straight forward and means i would get some use out of the the tramp.Also, i dont use the tramp as the speaker booms and crackles, even without a lead plugged in!! what do you think this is?Many thanks, Mike
