Hi,I recently had the footswitch for my AVT150 stolen, and rather than pay the 200 odd dollars to order one am trying to make a new one. I know the basics, that it requires four four-pin switches and two six-pin selector switches, as well as a 15-pin connection to the amp, but have had trouble finding a wiring diagram. Does anyone know of a place to find/order these on the internet, or is able to help me in any other way? Thanks, Sam
