Crate GFX 212T mains power conversion
----------I have a Crate GFX-212t amp that I brought from the U.S.A. back to Ireland last year. I need to convert the power input from 120v to 22ov mains power. I had a circuit diagram last year which showed how to do this - all that was required was to move one of the wires on the circuit board but I have lost the diagram. Can anyone tell me where I can get another copy of the circuit diagram or just which jumper to move the power input wire to J26, J27, J28, or J29?Thanks in advance!Joe.
