Subject: Speaker OHM question

I recently came across a 1967 fender vibro champ. It works but the volume is very very faint, I did a little research and found this amp specs. a 40hm 8 inch speaker. It appears the original speaker was replaced and now has a 80hm 8inch speaker, could this be the problem causing the low volume? All the tubes seem to be fine as , and the caps look to be ok. Any help?ThanksJack
