i have Fender princeton 65 amp, and i am going to start playing in clubs soon, so if anyone can tell can this amp handle gigs. Or if there are any tips for best seting up this amp live i'd be very grateful. This amp is all i got right now so, i am looking for best solution to play it and not mess it up on the first day.p.s anybody who's played this amp long, please tell me what are its weakneses, and how to decrease on the stage.
