Does anyone know about a source for getting a book/plans for an efficient design using a 2" horn (JBL 2446) and a cast frame 15" driver? Possibly would add a 10" making a three way.I would prefer a trap box design with at least 15 degree angles.PS- I plan to build Bill's DR 250/300 in the future, but I havedrivers for these now, and would like to use them.Thanks in advance,Taylor
