Subject: Re: Group together outdoors, spread around indoors Posted by granch on Sat, 06 Oct 2007 05:18:43 GMT View Forum Message <> Reply to Message

Makes excellent sense. Thank you. I intend to follow it outdoors. Inside I have a very unusual room. Like an isoscelese triangle with the organ along the base. The corner (90 degree) opposite the base I have 4 HSO subwooofers. two regular, two mounted facing each other vertically. Works great all over the place. This is only an approximation. The whole house is a 32 ft sguare. A large fireplace (stone) sort of diagonally bisects the square with the organ wrapped around 3 sides of the fireplace wall. I think I posted a pix once upon a time. Anyhow the only location that seems to make sense for the subs is in that corner, and it does shake the whole house very thoroughly. Must keep all crystal glasses well separated from each other.-Dick
