Subject: Terminating balanced lines Posted by wunhuanglo on Sun, 21 Dec 2003 16:15:09 GMT

I have an amp that has screw terminal balanced inputs. The XO that will be driving it has XLR outputs. I can cut a balanced cable and terminate the individual conductors under the screws, but that's a really awful connection mechanically, hanging on three pieces of 24G wire. How would an experienced person handle this? TIA
