hi ... I'm using P.Audio 12" coaxes on large OB panels for HT (stereo only at present).Got the HD bug, now must get to 21st century and do 5.1.Problem is finding speakers to keep up with the 12" P's for rear and centre front. The 8" P.audio coax looks promising, but 3 is rather spendy and may not be necessary. Suggestions...(no, not that one)?Thanks guys/gals, Zene
