Excellent info. That's print and file material. Have you heard the buzz on when hi-res PVR's might be introduced? And what's the resolution of commercial digital camcorders? I followed this stuff pretty closely a few years back, but that was when "the" digital camera was the Betacam SP Digital, which is really a professional videocamera for use in the field. It was expensive enough initially that only networks used it and smaller stations stayed with the analog Betacam units. So I'm wondering what the commercial digital cameras are capable of these days, and at what price tag.
