Back in the mid-70's I built a pair of Speakerlab SK's, and I loved them. I would like to build another pair, but the plans have long been lost and I need to find a new set. Also what are good resources for speaker components? I am considering using them as a L/R Fronts in a dedicated theater room. Of course we didn't have theaters back in the 70's, would they sound as good for a theater as I remember???
