Constantines sells a branding iron but it only has a few letters. There's a bunch of posts on the Bottlehead site about JohnEH making vinyl stencils with JPG images and a pantograph thingy haooked to the computer. About \$300 if memory serves. Also, from my Ski Shop days, we had a gizmo with a complete alphabet in brass templates and a Dremel like engarver that carved initials in the skiis. Then you rubbed a crayon over to color them. Check that out.
