Wow, Adrian! Those speakers are shaping up nicely! As for mounting your midrange horn, I'm looking forward to seeing replies from some of the cabinetry gurus here. But in the meantime, here are my thoughts. Behind the midhorn, use a wood brace made of 2x4 wood stock. Cut it with a beveled edge so that the horn sides are flush with the bracket. This way, the horn can be attached with screws and removed from the front if needed.
