Oh yes. Ok. Hole saw, not fly cutter. Nope i don't want to mess with with a fly cutter in a drill press or anywhere else. I have a hand drill and a couple hole saws. Other thing is there is no way to get precision like on a 'brad point' with a tool like this. But a standard brad point drill bit is not long enough as is the special grooved centering drill bit sold for hole saws. Could a machine shop put a brad point on one of those centering drills and how much would such a job cost? Plus those centering bits are just barely long enough to chuck up anyway.
