I've started fires with 3 1/2 HP routers and 3/4" carbide bits turning at 22k. The culprit is the heat that builds up in the compressed wood fibers and transfers to all that getting-denser-by-the-minute dust. For dados use an upshear bit or clear the cut (back up the bit) every few inches. Rabbits should be ok. It's when the dust has nowhere to go trouble starts.
