I thought my Weller WLC-100 with adjustable temp was pretty good. This Hakko puts it to shame. Construction: separate power unit and holder, tips are held with threaded shaft, not set screws, all metal.Temp adjustment is extremely fine and heats and cools rapidly from heavy cap lead point-to-point to fine regulator on PCB. No more lifted traces or overheated components.Solder a joint, even with 16ga. wire and the tip is ready to go almost as soon as you can move to the next one. Wow!
