Subject: What kind of wood are they using at Walmart?

I was strolling through a Walmart and notices that some of the furniture they were selling are solid wood. I have no idea what kind of wood they're using but it can't be American hardwood because the material alone would cost more than twice the piece itself. All the pieces are stained so dark that you can't see any of the grain. But it's definately not pine either.So what are these pieces made of?
