thanks Bill for the reply and the url on hardwoods.you asked;:::Have you got the space and patience (2 years)to air dry that lumber? Both the Cherry and Ash would be special.:::the soft maple has already been airdrying for about 12 months. I have it stored (temp) in my cabin... which actually looks a lot more akin to a wood shed.I'm looking forward to sawing some of the cherry and the ash (if the tree doesn't find it's good health again)...any of these woods good for speaker cabinets???Mike
