Show me another 3.3 cu ft sub that will do 90dB/watt at 30Hz and, more important if you're going to use it to listen to music, 100dB/watt at 40Hz. Then tell me what it costs. If it's less than \$100 I'll buy one. BTW, the T18 does what it does using a \$35 driver with these measured specs:fs 30HzQes .26Qms 12.0Qts .26Vas 0.7 cu ftSPL 85.9xMax 16mmSd 220 sq in
