I'm back here to give the answer to the stuck chuck ona craftsman drill problem.I went to the store.They guy had the chuck removed in a bout 2 minutes.Thew trick was not in using the chuck key.What he did was use the short end of a large diameterallen wrench in the mouth of the chuck and tighten it down.Then a tap with a hammer got it loose.No vise needed, no sweat. Maybe this is in the instruction manual with new drills. I didn't havethe book.:-/
